- **Graduation** – Serampore College
- **Higher Secondary (78%)** – WBBHSE
- **Madhyamik (63%)** – WBBSE

Professional Experience

Frontend Developer

Anand Techmasters Pvt Ltd | Jul 2025 – Present

- Developed intuitive dashboards and user interfaces with React, Tailwind, and charting libraries.
- Partnered with marketing & sales teams to deliver client-focused solutions, boosting project acquisition.
- Spearheaded UI/UX strategy, ensuring 95% client satisfaction in design acceptance.
- Negotiated contracts and built strong client relationships, leading to repeat business.

Frontend Developer

Cloud4Things Technologies Pvt Ltd | Mar 2024 – Jun 2025

- Delivered data-driven dashboards using React, Apex Charts, and Material UI, enhancing visualization accuracy.
- Optimized UI workflows, improving page load speed by 30%.
- Created wireframes and prototypes in Figma/Adobe XD for seamless user journeys.
- Managed independent projects and supported digital marketing campaigns, ensuring timely delivery.

HTML Developer

Codeclouds IT Solutions Pvt Ltd | Nov 2018 – Mar 2024

- Converted design files (PSD, Figma, Adobe XD) into responsive, pixel-perfect HTML/CSS templates.
- Implemented modern UI layouts, improving client website engagement.
- Acted as client liaison, delivering on-time progress updates and ensuring smooth communication.
- Consistently delivered high-quality projects within deadlines.

Senior Web Designer

Onqanet Technologies Pvt Ltd | Feb 2016 – Oct 2018

- Translated PSD templates into HTML/CSS for WordPress & Magento projects.
- Designed branding assets (logos, flyers, business cards) for diverse clients.
- Created modern UI/UX designs, improving client satisfaction and project outcomes.
- Promoted from Junior to Senior Web Designer based on performance.

Project: Gas Grid – Smart Gas Metering Platform

Role: UI/UX / Frontend Designer

Tech Stacks Used : HTML , CSS, JS, jQuery, Bootstrap, React, Material UI, Apex Charts, High Charts, AM Charts.

Description:

Gas Grid is a smart metering platform designed for seamless integration with any meter type, network, and protocol, eliminating vendor lock-in and enabling interoperability. As the UI/UX and Frontend Designer, I led the creation of intuitive, responsive, and user-centered interfaces using HTML, CSS, JavaScript, and other technologies. My responsibilities included designing wireframes, user flows, and prototypes for complex data visualizations, conducting user research and usability testing, and collaborating with cross-functional teams to ensure design integration with system logic. I also implemented design systems and accessibility standards to enhance usability across various devices.

Project: Smart Energy Metering Platform

Role: UI/UX / Frontend Designer

Tech Stacks Used : HTML , CSS, JS, jQuery, Bootstrap, React, Material UI, Apex Charts, High Charts, AM Charts.

Responsibilities & Contributions:

Spearheaded the UI/UX design for the platform, focusing on creating intuitive, responsive, and user-centric interfaces.

Designed wireframes, user flows, and high-fidelity prototypes to simplify complex real-time data visualizations for energy administrators and field technicians.

Conducted user research and usability testing to align the platform's functionality with user expectations and industry best practices.

Collaborated with cross-functional teams including product managers, developers, and data analysts to ensure seamless integration of design with system logic.

Applied design systems and accessibility standards to enhance usability across devices and user roles.

Project: Water Tank Monitoring System

Role: UI/UX / Frontend Designer

Tech Stack: HTML, CSS, JS, jQuery, Bootstrap, Material UI, Apex Charts, High Charts, Fusion Charts.

Responsibilities:

Led frontend development from design to implementation, ensuring a seamless user experience.

Integrated charting libraries for dynamic visualizations of water level data with real-time updates and predictive analytics.

Developed a responsive design using Bootstrap and Material-UI for optimal viewing on various devices.

Created a visual alerting system with color-coded indicators to notify users of critical conditions.

Focused on performance optimization and usability testing for an efficient workflow for water management personnel.

Project: Smart Energy Metering Platform

Role: UI/UX / Frontend Designer

Tech Stacks Used : HTML , CSS, JS, jQuery, Bootstrap, React, Material UI, Apex Charts, High Charts, AM Charts.

Responsibilities & Contributions:

Spearheaded the UI/UX design for the platform, focusing on creating intuitive, responsive, and user-centric interfaces.

Designed wireframes, user flows, and high-fidelity prototypes to simplify complex real-time data visualizations for energy administrators and field technicians.

Conducted user research and usability testing to align the platform's functionality with user expectations and industry best practices.

Collaborated with cross-functional teams including product managers, developers, and data analysts to ensure seamless integration of design with system logic.

Applied design systems and accessibility standards to enhance usability across devices and user roles.

I hereby declare that all the information given above is true and is best of my knowledge and belief.
